

ExoDynamics

**Enabling Limitless  
Movement for  
Knee Related  
Injuries**

# Strider MK. II

## Never Before Seen

There is nothing like it on the market right now. Experience all the functionality of an exoskeleton in the familiar style of a knee brace.

## Integrated Passive and Active Systems

The Strider remains operational even when there is no power. Our novel liquid spring system works around the clock so you don't have to.

## Customized to YOU

Every person is unique, and so is every purchase of the Strider. Each and every model is manufactured to your specific knee anatomy.

# Knee Pains, Injuries, and Tears

65%

Rise in knee pain over  
the past 20 years

25%

Of adults are affected  
by knee pain

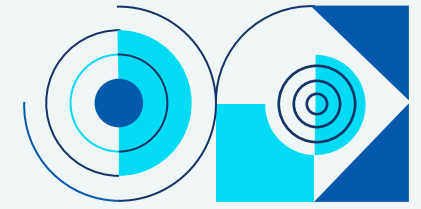

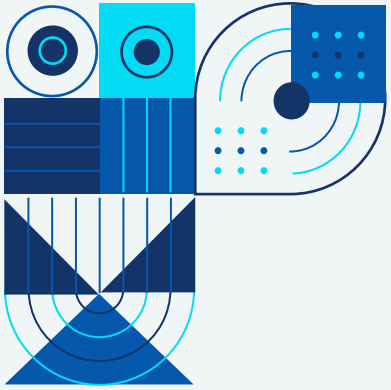

40%

Of all sport injuries are  
related to the knee joint

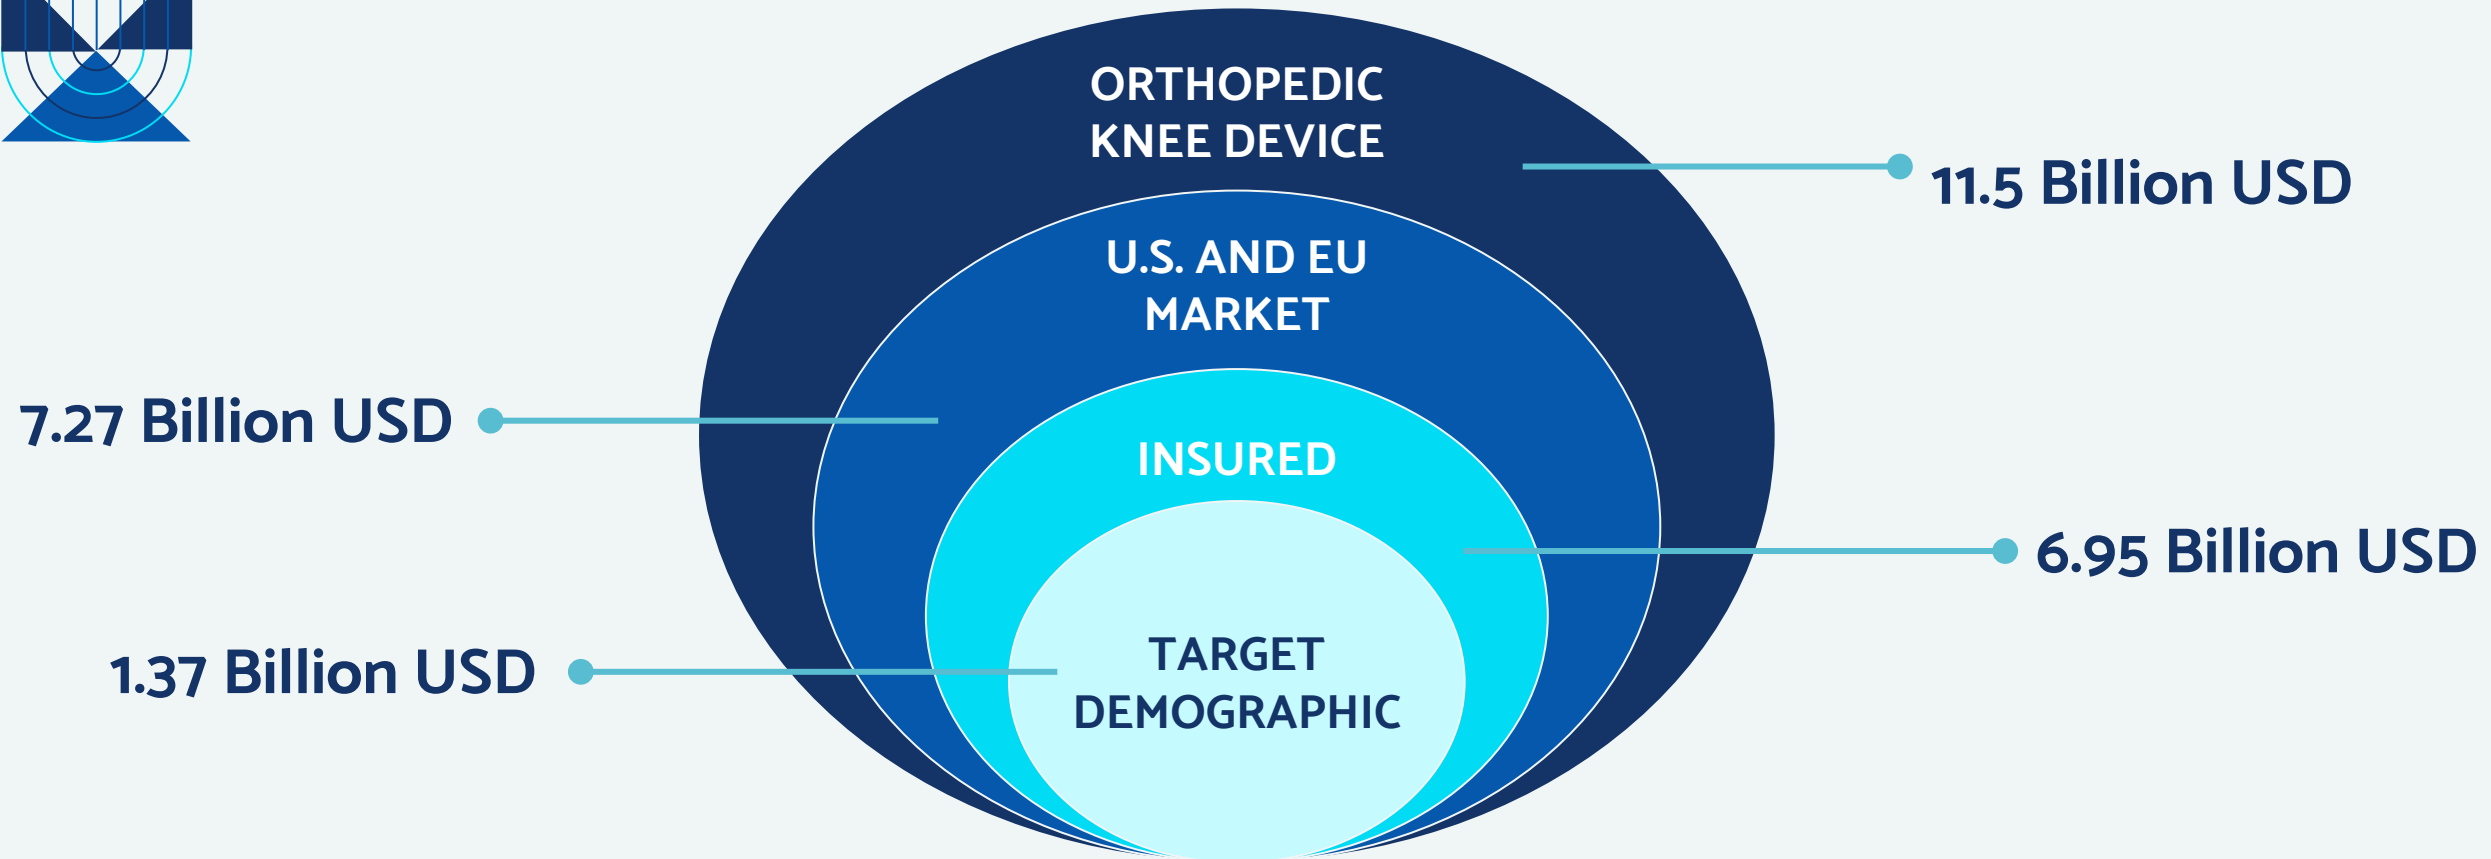

52%

More likely to develop  
knee osteoarthritis for  
those in physically  
demanding jobs

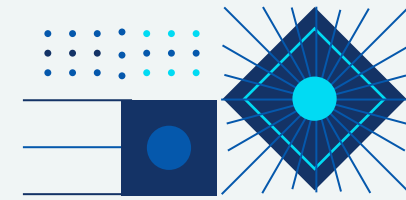

# Market Sizing

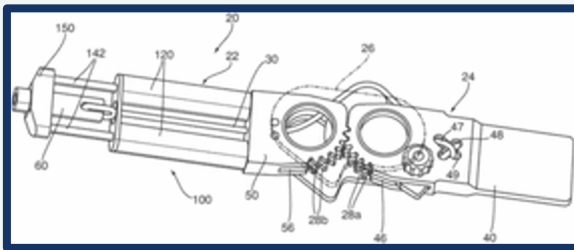

**Total Market Value: 1.37 - 1.71 Billion USD**

# Strider MK. II

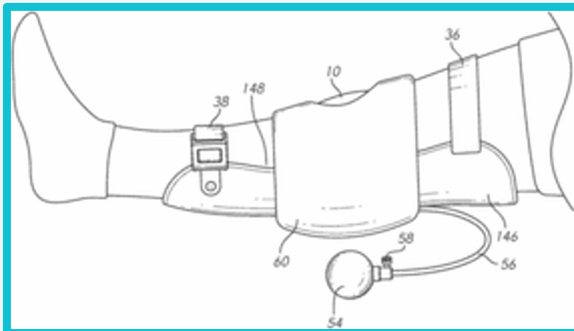

# Intellectual Property (IP)

## Patents that may pose a barrier to commercialization

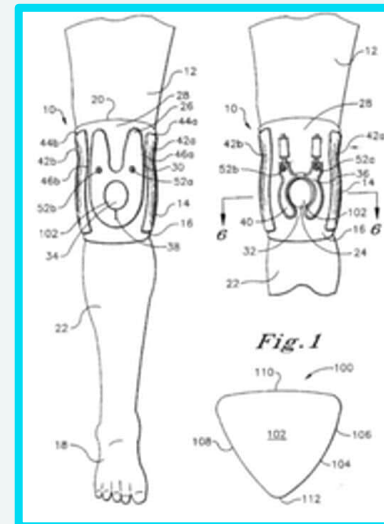

Hinge for a brace (US11464661B2)

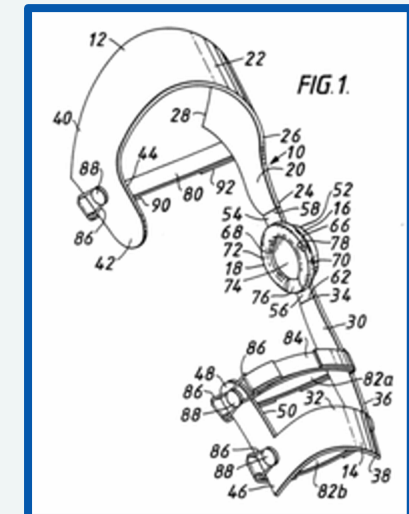

Soft inflatable exosuit for knee rehabilitation (US11259980B2)

- ✓ Conducted a “Freedom to Operate” search
- ✓ Diversified search queries to broaden search
- ✓ **Strider Mark II has the freedom to operate**

## Expired Patents

Knee brace having an inflatable pad circumscribing the patella (US5792084A)

Osteoarthritic knee brace (EPO670152B1)

# Equity Considerations

Accessibility

Affordability

Inclusivity

# Competitive Landscape Research

Cyberdyne	<ul style="list-style-type: none"><li>- Sensors to detect electrical signals in muscles</li><li>- Computer system interprets signals and controls electric motors that drive joint motion</li><li>- Battery powered for electric motors</li></ul>	Wandercraft	<ul style="list-style-type: none"><li>- Motorized joints and sensors</li><li>- Motors at the hip, knee, and ankle joints, which are controlled by a wearable remote control</li><li>- Adjustable to fit different body types and is modular</li><li>- Currently undergoing clinical trials in Europe</li></ul>
Esko Bionics	<ul style="list-style-type: none"><li>- Sensors that detect the user's movements and weight shifts</li><li>- Computer system on waist interprets signals and controls motors</li><li>- Battery powered, but is also removable</li></ul>	Articulate Labs Inc	<ul style="list-style-type: none"><li>- Uses electrical stimulation to activate specific muscle groups around the knee joint, helping to improve knee function and reduce pain</li><li>- Sensors that detect the user's movements and adjust the stimulation patterns and intensity accordingly</li><li>- Includes an app that allows users to track their progress and adjust settings, as well as access instructional videos and other resources</li></ul>
Hyundai Medical Exoskeleton (H-MEX)	<ul style="list-style-type: none"><li>- Sensors that detect the user's movements and weight shifts</li><li>- Computer system on waist interprets signals and controls motors</li><li>- Still in development phase</li></ul>		
ReWalk Robotics	<ul style="list-style-type: none"><li>- Sensors that detect changes in the user's posture and balance, allowing it to adjust its movements and maintain stability</li><li>- Motors that provide powered movement to the hip and knee joints</li><li>- Controlled using a wearable remote control that the user can activate to stand up, walk, turn, and sit down</li><li>- Using crutches or other assistive devices for support</li></ul>		

# Competitive Landscape Research Cont.

Indego	<ul style="list-style-type: none"><li>- Sensors and motors to detect the user's movement intentions and provide powered assistance for walking and standing</li><li>- Connected to a control unit worn around the waist and a backpack-style power source</li><li>- Sensors detect the movement and send a signal to the motors to provide assistance in lifting the leg and placing it forward</li></ul>	Meditouch	<ul style="list-style-type: none"><li>- Biofeedback technology to guide patients through exercises and provide real-time feedback on their movements and progress</li><li>- Adjustable to fit patients of different sizes and can be used with both legs</li><li>- Control box that contains sensors and motors</li></ul>
Rex Bionics Ltd	<ul style="list-style-type: none"><li>- Hands-free control system that allows users to initiate movements and adjust settings using body movements like weight-shifting or leaning forward</li><li>- Sensors, motors, and software algorithms to detect the user's movement intentions and provide powered assistance for walking and standing</li></ul>	Thuasne	<ul style="list-style-type: none"><li>- Dynamic compression to help reduce pain and improve function</li><li>- Adjustable hinge system allows the user to control the amount of support and flexibility provided by the brace</li></ul>
ExoAtlet	<ul style="list-style-type: none"><li>- Backpack containing the control unit and power source</li><li>- Sensors, motors, and software algorithms to detect the user's movement intentions and provide powered assistance for walking and standing</li><li>- Controlled by a therapist using a tablet-based interface, allowing for real-time adjustment of assistance level and gait parameters</li><li>- Designed to be used in rehabilitation settings</li></ul>		

# Competitive Landscape Research Cont.

MarsiBionics	<ul style="list-style-type: none"><li>- Lithium-ion battery for power</li><li>- Bluetooth connectivity for smartphone app control</li><li>- Sensors, motors, and software algorithms to detect the user's movement intentions and adjusts the resistance of the knee joint in real time</li></ul>
--------------	---

Rehab-Robotics Company Limited	<ul style="list-style-type: none"><li>- Mechanical linkage system for adjusting the angle of the knee joint</li><li>- Knob or lever for adjusting the angle of the knee joint</li><li>- The angle of the knee joint can be locked in place to provide stability during physical activities</li></ul>
--------------------------------	--

SuitX	<ul style="list-style-type: none"><li>- Several components, including a hip module, thigh module, knee module, and foot module, which can be combined and adjusted to fit the user's individual needs</li><li>- Controlled by a wireless remote that allows the user to adjust the level of assistance provided by the device</li><li>- Powerful motors to provide assistance to the user's lower limbs, helping them to stand up, walk, etc</li><li>- Advanced sensors and algorithms to adapt to the user's movements in real-time, providing a more natural and intuitive experience</li><li>- Unique feature is its "quick release" mechanism, which allows the user to easily detach and reattach the exoskeleton components for greater flexibility and convenience</li></ul>
-------	---

B-Temia	<ul style="list-style-type: none"><li>- Sensors, motors, and software algorithms to detect the user's movement intentions and provide powered assistance for walking and standing</li><li>- Backpack containing the control unit and power source</li><li>- Unique "stair mode" allows the device to detect when the user is climbing stairs and adjust the assistance provided accordingly</li></ul>
---------	---

Ottobock	<ul style="list-style-type: none"><li>- Sensors that detect the user's movements</li><li>- Passive spring-based mechanical system</li></ul>
